

Make Sure All They Catch Is the Ball

Preteens and Teens Need
Vaccines to Stay Healthy

Here are the top five reasons why it's important

- 1** Your kid's aren't invincible, even if they think they are.
- 2** Preteens and teens need vaccines, even if immunized as a baby.
- 3** Vaccination only takes a minute and protects kids for years.
- 4** Recommended vaccines are covered by most health insurance plans and are available at no cost for uninsured and underinsured kids.
- 5** No parent should ever have to lose a child to a vaccine-preventable disease.

Recommended Vaccines:

- Meningococcal
- HPV
- Tdap
- Influenza

Ideally, children should receive these vaccines at 11-12 years-old. If your child missed a vaccination at this age, it's not too late.

Multiple vaccinations can be given in the same doctor or clinic visit. Talk to your child's healthcare provider to learn more.
